List of trick learned during media archeology workshop 4-7
april 2016

Equipment :

Monitor,
Amiga 1200 with running amigaOs 3.0 and with 2 partion on
the hardDisk called DATA and SYSTEM
Mouse for Amiga
Floppy disk - USB hard drive
Floppy disk already formatted for the AmigaOS free to use
25 pin - USB nullmodem cable
Manuall of amiga (German Language)

If you would like to use a mordern new floppy(1,4 Megabite
size) for share data between Amiga1200 and your machine:

1) Cover with balck tape the hole on the bottom left of the
floppy

2) Put the ploppy inside the amiga and use the program tools
for format it

3) Now you can use it as a normal floppy

If you would like to share data using the Serial Port you
can use the 25 pin - usb cable.

I had used this https://www.amigaforever.com/ae/ that is a
tool for windows that allow easyly to make the connection
and share file.

On the amiga there is already installed and set up the
sofware to make run it automatically the connection.

With this cable it's also possibile use othe way to make a
comunication like using telnet or other...

Here there is a huge database for program,libs and more for
amiga os (remember to check the compatibility because there
are several version of the operativeSystem)

http://aminet.net/

the program are .lha archive for decompress the file and install on the amiga you need run a shell and type

lha x <path where is located the file> <file name> <destination>

Example:

lha x DATA:Play16.lha DATA:

the lha command of course has several option if you need more you che read the documentation.

If you need to install a libs after decompressed you need open the file, show all the file (right-click->windows -> show all file) and grub the file .libs in to the folder SYSTEM -> libs (to make it vesible you have to show all the file)

It's possible usign the amiga scripting languare called AREXX file are .rexx and for make it run open a shell and type:

rx <path where is located the file> <file name>

here to get started http://wiki.amigaos.net/wiki/ AmigaOS_Manual:_ARexx

I have installed a sound player that it's called Play16 that it's able to play also wav file.
To use it open a shell :

Play16 <path where is located the file> <file name>

here some detail about it http://aminet.net/package/mus/ play/Play16
